

Relationship between motor docility and cognitive abilities of pupils

Project no. VEGA 1/0484/22

Annotation

The aim of the project is to increase the knowledge about the relationship and its strength between the level of motor skills and the level of cognitive abilities of primary and secondary school students. The anticipated results of the project will be applicable in further interventions aimed at promoting increased physical activity in children and young people also through physical and sport education, not only in terms of physical but also mental health.
