

Inštitút anglistiky a amerikanistiky FF PU v Prešove

Program: anglický jazyk a anglofónne kultúry, Bc.
Štátnicové témy

English language and linguistics

Brief subject description:

The topics cover essential issues pertaining to the system, structure and functioning of the English language ranging from phonetics/phonology, morphology, lexicology, syntax up to translation studies understood as an interdisciplinary. The aim of the state final exams is to consolidate undergraduates' knowledge acquired during the previous years of their study at the B.A. level and encourage them to think about core linguistic disciplines as well as essentials of translation theory in a broader synthesizing perspective.

Areas of competence required:

- Candidates are required to acquire a holistic perspective of the structure and system of English and its functioning in connected discourses;
- Candidates are required to show a firm grasp of theoretical as well as practical aspects of English linguistics;
- Candidates are required to demonstrate their abilities of abstract thinking at essential language levels in order to distinguish or compare various linguistic and translational phenomena, using specific examples;
- Candidates are required to use established terminology related to particular linguistic disciplines and translation theories;
- Candidates are required to introduce the drawn topic briefly, then move on to discuss specific details, and subsequently respond to any questions raised or comments made by the members of the state exam committee.

Exam topics and questions:

1. Introduction to linguistics – Verbal communication

- Verbal communication components: information, communication means, communication network, communication activity
- Verbal message elements

2. Introduction to linguistics – Language and language functions

- Language as a structured system
- Common language functions (Jakobson's approach) – referential, expressive, conative, phatic, metalingual, poetic

3. Introduction to linguistics – Linguistics and its branches

- Language levels and core linguistics
- Linguistics vs. other branches of linguistics
- Methods of and approaches to studying language

4. Phonetics and phonology

- Speech production (the vocal tract and its parts)
- Segments: vowels (classification, quantity vs. quality, diphthongs, and triphthongs) and consonants (classification, places of articulation, manner of articulation, voicing)

5. Phonetics and phonology

- Phonetics and phonology (differences between the two fields, phone, phoneme, allophone)
- Syllable
- Lexical stress

6. Phonetics and phonology

- Sentence stress
- Aspects of connected speech (assimilation, elision, linking)
- Intonation (tone and intonation systems, pitch, tones, functions of intonation)

7. Morphology

- Noun: the grammatical categories of countability and number
- Regular and irregular number formation
- Pluralia and singularia tantum

8. Morphology

- Noun: the grammatical category of determination
- Determination of common and proper nouns
- Determiners

9. Morphology

- Noun: the grammatical categories of gender and case
- Gender class system in English
- Expressing case relations in animate and inanimate nouns

10. Morphology

- Verb: the grammatical categories of tense and aspect
- Expressing future time
- Unreal tenses

11. Morphology

- Verb: the grammatical categories of mood and voice
- The form and usage of subjunctive mood
- The usage of passive voice and the types of agent

12. Morphology

- Adjectives: form and function
- Attributive adjectives, predicative adjectives, adjectives in postposition
- Gradation of adjectives

13. Morphology

- Adverbs: form and function
- Gradation of adverbs

- Adverb vs. adverbial

14. Lexical semantics

- The meaning of word – types of word meaning
- Comparison of various theories of word meaning
- Possible strands in the English lexicon (territorial, social, stylistic and temporal)
- Lexical configurations – lexical field theory

15. Lexical semantics

- Paradigmatic relations between words: synonymy, antonymy, hyponymy, polysemy and homonymy

16. Lexical semantics and phraseology

- Syntagmatic relations between words: idioms and collocations
- Multi-word units in English: typical features and problems of their classification – free combinations vs. fixed expressions
- Paremiological vs. non-paremiological multi-word units

17. Word-formation

- Different conceptions of word in English
- Lexicalization and productivity
- Word-formation processes: principal and minor

18. Semiotics

- de Saussure's theory of linguistic sign
- Ogden and Richard's semiotic triangle
- Peirce's typology of signs: icon, index, symbol
- Morris' conception of semiotics

19. Syntax

- The structure of phrase
- Major types of phrase and their syntactic functions

20. Syntax

- Simple sentence, sentence and clause
- Basic clause patterns
- Communicative types of sentence

21. Syntax

- Clause elements: types and semantic roles
- English word-order
- Sentence structure, verb complementation

22. Syntax

- Complex sentence and transformations: interrogation, negation, passivization, subject-verb inversion, cleft sentences, extraposition, fronting, postponement of postmodifier
- Coordination and subordination
- Compound and complex sentences

- Finite and non-finite clauses, reported speech

23. Translation theory

- Translation as meta-communication: possible approaches
- Central concepts in translation theory: source and target texts, equivalence, identity, (un-)translatability, the question of loss & gain
- Supermemes in translation theory
- Literary vs. non-literary text: from binaries to borders

24. Translation theory

- Approaches to text and textuality in translation (de Beaugrande & Dressler, Halliday, Nord)
- Translation methods, strategies, techniques and shifts
